# Dedicated Knockdown System

PORTABLE TRAFFIC SIGNAL SYSTEMS

## PROVIDES A WIRED INTERFACE WITH TRAFFIC CONTROLLERS

The Dedicated Knockdown System allows a Horizon Signal System to be operated by a standard street corner controller. This system provides a quick and easy temporary signal substitution in the event of a knockdown, relocation, or traffic pattern reconfiguration. By interfacing with the existing signal infrastructure, the temporary signal is fully monitored by the intersections Malfunction Management Unit for maximum safety and efficiency.

## How it Works

The Dedicated Knockdown System provides a simple interface to connect the signal to an existing intersection control cabinet. The easy-up hydraulic lift system makes deployment quick and easy, so the intersection can be up and running as soon as possible. While in operation, the temporary signal is monitored via the existing cabinet's Conflict Monitor, just as if it were a normal permanent signal.
