

ACTIVE VEHICLE BARRIER SAFETY SCHEMES

An Active Vehicle Barrier (AVB) Safety Scheme provides warnings to innocent drivers with enough advance notice to properly stop or clear the AVB. The system can include warning beacons, a sign and an activated gate and has customizable response times based on the AVB Safety Scheme.

Just like other TAPCO Intelligent Warning Systems, the AVB Safety Scheme can be customized to meet any facility's needs. The system can be hardwired or solar-powered and linked over the air to command and control facilities.

STANDARD FEATURES

- Dual horizontal warning beacons
- ACTIVE BARRIER AHEAD sign
- Optional activated gate

OPTIONAL FEATURES

- Audible warning alerts
- DO NOT ENTER blank-out signs
- 12" red signal face
- MUTCD-compliant or standard signs; custom signs available
