

## REVERSE ENTRY ALERT DETECTION SYSTEM SOFTWARE

### INTELLIGENT WARNING SYSTEM MONITORING FOR FOR SECURE FACILITY OPERATIONS

BlinkLink<sup>®</sup>, powered by TAPCO, is an easy-to-use, cloud-based event management software, accessible from any web-enabled device. It provides security personnel with the ability to remotely manage and monitor their entry points.

Configurable to meet the needs of any facility, BlinkLink<sup>®</sup> collects real-time data and sends voice, email and SMS text notifications to predetermined recipients.

#### KEY BENEFITS

- Generate custom activation reports and analyze safety trends
- Respond to high-priority alerts and quickly remediate events by analyzing up to 15 high-resolution color images with directional overlay
- Obtain additional event details and insightful data via alert video and remote system streaming
- Remotely view system health and diagnostics for online confirmation
- Get high-speed event notifications via secure cellular networks
- Use the intuitive, interactive dashboard to get a comprehensive view of deployed systems

**MONITOR, SCHEDULE,  
MANAGE AND REPORT  
FROM ANYWHERE**

**REMOTELY OVERRIDE  
SYSTEMS AS NEEDED**

### **Quickly Monitor Intelligent Warning Systems**

BlinkLink lets you easily monitor the status of every TAPCO Intelligent Warning System from its interactive map view, gather historical device data and quickly access individual systems through the search and filter function.

### **Receive Email and SMS Notifications**

Receive immediate voice, email or SMS alert notifications when a traffic emergency occurs or traffic device maintenance is needed. Determine what traffic events and health performance indicators trigger notifications. Keep everyone informed by tailoring notification recipients, such as operators, authorities and maintenance contractors.

### **Custom Reporting**

Generate custom reporting for each device's historical data. Analyze event-related data to establish lessons learned for future best practice implementation. Alert notification data collects when notifications are sent out and who received them.
