

INTELLIGENT WARNING SYSTEM MONITORING FOR SMART CITY INFRASTRUCTURE

BlinkLink®, powered by TAPCO, is easy-to-use, cloud-based event management software agencies utilize to manage, schedule, identify, quantify and monitor singular or holistic Intelligent Warning System deployments.

By collecting real-time data, BlinkLink® provides transportation officials with the information needed to identify emergencies or system characteristics via voice, email and SMS notifications. Cameras can be incorporated to capture images and video, as well as facilitate live streaming.

BlinkLink® communication is secured through various network configurations and may be integrated with third-party software. It can also be integrated with these popular TAPCO-made Intelligent Warning Systems:

- Wrong-Way Alert System
- Pedestrian Crossing System
- High Water Warning System
- School Zone System
- Overheight Warning System
- Intersection Conflict Warning System
- Curve Warning System
- Engineered-to-Order System

Application Programming Integration (API)

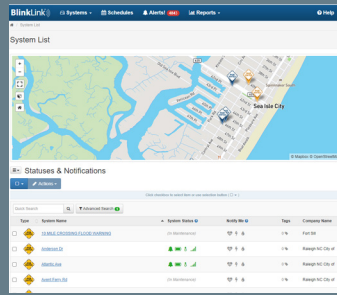

Third-Party Software (ATMS Display)

NOTIFY

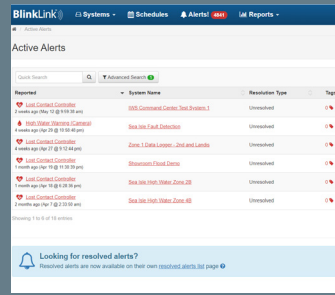

Keep your responsible parties informed when an incident is detected by receiving alert notifications with minimal latency.

MONITOR

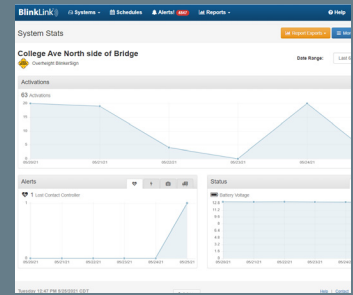

Easily program and view the status of every TAPCO Intelligent Warning System from the interactive map view and gather historical data.

MANAGE

Eliminate time-consuming site visits by remotely monitoring each system's critical health and diagnostics proactively.

REPORT

Configure reporting parameters to develop a comprehensive view of your system's activity and implement best practices based on actionable data.

QUICKLY MONITOR INTELLIGENT WARNING SYSTEMS

Easily monitor the status of every TAPCO Intelligent Warning System from the interactive map view, gather historical device data and quickly access individual systems through the search and filter function.

RECEIVE EMAIL AND SMS ALERTS

Receive immediate voice, email or SMS alert notifications when a traffic emergency occurs or traffic device maintenance is needed. Determine what traffic events and health performance indicators trigger notifications. Keep everyone informed by tailoring notification recipients, such as operators, authorities and maintenance contractors.

CUSTOM REPORTING

Generate custom reporting for each device's historical data. Analyze event-related data to establish lessons learned for future best practice implementation. Collect data about when notifications are sent out and who received them.
