

SMART CITY SOFTWARE FOR YOUR WRONG-WAY NETWORK

TAPCO's smart city software, BlinkLink®, provides a variety of remote management capabilities for any wrong-way network, making it easier to access and manage your systems at any time.

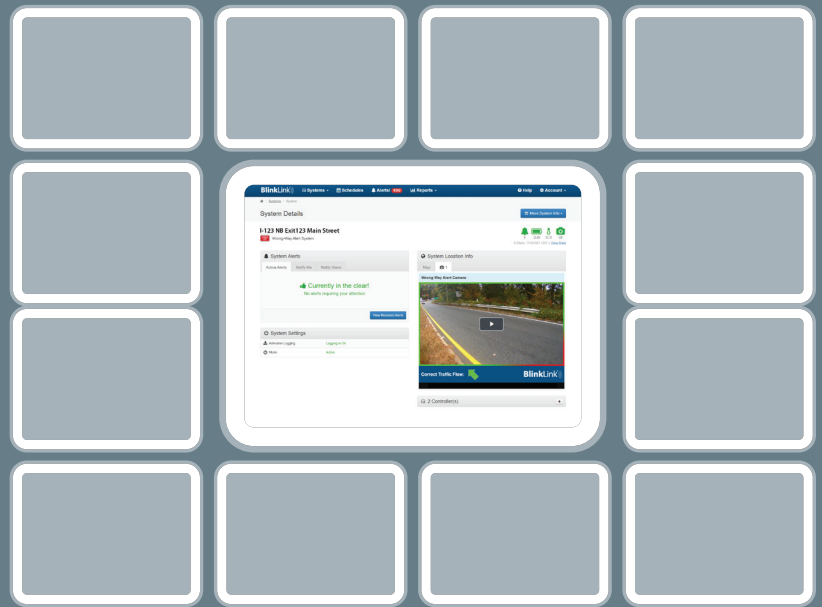

Easily adaptable to the needs of any agency, BlinkLink® collects system data and alerts officials in real-time of changes in system status — as well as wrong-way events, with customizable email and SMS notification capabilities. Plus, the platform offers image capture, downloadable video and livestreaming, allowing agencies to remotely view key locations or access event footage.

KEY BENEFITS

- Integrate with Advanced Traffic Management System software for additional upstream routing and logical command generation
- Analyze up to 15 high-resolution, color images and video with a directional overlay
- Remotely view system health and diagnostics for optimal, reliable operation
- Get high-speed event notifications with cellular and fiber networks
- Intuitive, interactive dashboard with map view of deployed systems

ACCESS YOUR SYSTEMS
ANYTIME, ANYWHERE

System-Wide Visibility

Blinklink® provides a variety of remote management capabilities, including system-wide visibility to help agencies keep track of the status of all systems in their network.

Real-Time Alerts

When a traffic emergency occurs or a system is in need of maintenance, receive real-time, customizable alert notifications — delivered straight to your phone or inbox.

Actionable Data

Collect actionable data through custom reporting from any system in your network, allowing agencies to analyze event-related data and make proactive changes to save lives.

Video Livestreaming

Available on-demand, visually confirm site-specific events with high-resolution livestreaming — whether checking for an active wrong-way driver or verifying current site conditions.

Downloadable Content

When a wrong-way event occurs, BlinkLink® makes it possible to download videos of wrong-way events for future use, allowing agencies to analyze footage to inform future decisions.
