Reliability,
Accessibility,
and Visibility

Unmatched in the industry, the Street Brite Sign's heavy-duty frame is constructed with aircraft-grade, 8-gauge aluminum.

It can withstand **wind speeds up to 150 miles per hour** and is **2/3 the weight of other back-lit signage**.

The sign's 3M translucent material illuminates as well as reflects to maintain zero shadow stabilization in all lighting conditions.

***Designed to meet FDOT
