

SMART SCHOOL ZONE WARNING

When it comes to school zone safety, protecting students starts with implementing the proper safety measures. Alerting drivers of approaching school zones through safety countermeasures can help boost awareness and compliance.

Depending on the application and each school zone's safety needs, TAPCO provides a variety of warning offerings, including enhancements from our Smart Crosswalk Portfolio and School Zone Speed and School Zone Speed Limit Warning Systems — all engineered to enhance safety in any school zone setting. Plus, choose from available LED-enhanced warning alerts like the BlinkerSign®, BlinkerBeacon® and RRFB to maximize student safety and visibility.

DID YOU KNOW?

Traffic control devices can decrease pedestrian collisions by up to 15%, but only 56% of middle schools have traffic lights or crosswalk systems in their school zones

SMART HUB

Simplify the management of any network of Smart School Zone Warning Systems with TAPCO's smart city platform. Smart Hub offers a variety of management capabilities, including remote scheduling, system monitoring and data collection to ensure your network of systems is optimized at all times to help keep students safe.

System-Wide Visibility

Keep track of all systems in network to never miss a beat, especially when it comes to system status and health.

Actionable Data

Collect historical trend insights on when schedule changes most often occur or are manually overridden in order to more effectively schedule warning alerts.

Remote Scheduling

Easily program when system warning lights should flash, with schedules that can be applied to any number of systems — plus, adjust in real-time to adapt to school zone scheduling changes if needed.

Real-Time Alerts

Get notified when a system knockdown occurs, with real-time, customizable event alerts delivered to your phone or inbox.
